Spring Security

MitoCode Network

¿Qué es?

An orchestration service for composable data microservice applications on modern runtimes.

Provides a set of tools for common patterns in distributed systems. Useful for building and deploying microservices.

Provides a consistent approach to data access – relational, non-relational, map-reduce, and beyond.

SPRING INTEGRATION

Supports the well-known *Enterprise Integration Patterns* via lightweight messaging and declarative adapters.

SPRING BATCH

Simplifies and optimizes the work of processing high-volume batch operations.

SPRING SECURITY

Protects your application with comprehensive and extensible authentication and authorization support.
